WNODE CONSTITUTION v2.1

Governing Law: England & Wales

FOUNDERS' PREAMBLE

By: Stephen Soos (WUID 1000001-0426-01-AA)
Founder • Architect • Initial Steward • Initial Governance Board Member

Wnode was created as a community-owned, community-governed, and AI-powered planetary compute mesh.

As the Founder, I established this Constitution to ensure that Wnode remains:
• open,
• decentralised,
• transparent,
• fair,
• sovereign, and
• permanently aligned with the interests of its users, node operators, and token holders.

I recognise that the Wnode Mesh belongs to the community, and that governance must always remain accountable to those who operate, support, and rely upon it.

This Constitution v2.1 sets out the governance structure, rights, duties, and safeguards that protect the Wnode Mesh, the DAO, and the community for all future generations. It establishes full operational sovereignty through Wnode-owned servers, development environments, power systems (including solar arrays), and a recursive sovereign AI LLM.

Wnode is deliberately built for **maximum independence** — owning and operating its own critical infrastructure to eliminate reliance on third-party cloud providers and ensure resilience against censorship, deplatforming, or external control.

It is adopted with the shared commitment that Wnode shall remain a public good, a community asset, and a truly sovereign, decentralised network governed by its participants with a strict **1 Soul = 1 Vote** structure.

SECTION 1 — DEFINITIONS

(This section establishes the precise meaning of all governance terms used throughout the Constitution.)

For the purposes of this Constitution, the following terms shall have the meanings set out below:

1.1 "Wnode Mesh"
The decentralised compute network operated collectively by node operators, governed by the DAO, and maintained through the governance structures defined in this Constitution.

1.2 "DAO" or "Wnode DAO"

The decentralised autonomous organisation composed of verified token holders and NODLR Souls, empowered to vote on proposals and amend this Constitution.

1.3 “Founder”
Stephen Soos (WUID 1000001-0426-01-AA), the creator and architect of the Wnode Mesh, and the individual who established the initial governance framework, token model, and operational architecture.

1.4 “Founder Board”
A governance body composed of four (4) members, including the Founder, responsible for:
• constitutional guardianship
• Steward appointment and removal
• Infrastructure Manager oversight
• emergency powers
• long-term strategic protection of the Mesh

The Founder Board is not fully elected by the DAO in its initial form to protect against early-stage capture. It includes progressive decentralisation mechanisms as defined in Section 2.

1.5 “Governance Board”
A body made up of the initial members and responsible for:
• operational oversight
• proposal validation
• treasury supervision
• ensuring DAO decisions are implemented

The Founder is the Initial Governance Board Member.

1.6 “Steward”

The holder of the Stewardship Licence, responsible for day-to-day Mesh operations, customer support, compliance, and UX management, as defined in Section 6. The Founder is the Initial Steward.

1.7 “Stewardship Licence”

A perpetual, revenue-bearing commercial licence granted by the Founder Board to a Steward, defining operational rights, obligations, revenue share, and revocation conditions.

1.8 “Infrastructure Manager” (IM)

The technical authority responsible for:
• uptime
• infrastructure reliability
• node verification
• emergency technical response
• hardware acquisition and maintenance

The IM operates independently of the Steward and answers to the Governance Board.

1.9 “Soul”

A non-transferable identity token representing a verified individual within the Mesh.
Souls may be:
• Locked Souls — identity-only, non-voting
• Voting Souls — earned through node operation and NODLR verification

1.10 “NODLR”

A verified node operator who has passed technical and identity verification and earned a Voting Soul.

1.11 “WUID”

The Wnode Universal Identifier assigned to each Soul. The Founder’s WUID is 1000001-0426-01-AA.

1.12 “Founder Affiliate Tree”

A hierarchical, non-governance, non-token, commercial asset representing referral lineage and organic growth within the Mesh. It is:
• transferable
• sellable
• permanent
• non-governance-bearing
• infinite in depth
• entitles the Founder to 3% of the entire Affiliate Tree to infinity, as defined in the platform’s payment rules and Stripe architecture

1.13 “Frozen Affiliate Tree”

A Founder Affiliate Tree or NODLR Affiliate Affiliate Tree that remains owned by the individual but is restricted from new Level 1 recruitment.

1.14 “Governance Proposal”

A proposal submitted to the DAO for:
• operational changes
• constitutional amendments
• treasury actions
• parameter updates
• role appointments

1.15 “Emergency Action”

A time-sensitive action authorised by the Founder Board or Infrastructure Manager to protect the Mesh from outages, attacks, catastrophic failures, or regulatory threats.

1.16 “Treasury”

The on-chain financial reserves of the DAO, governed by DAO vote and safeguarded by the Governance Board.

1.17 “Wnode Token”

The governance-adjacent utility token of the Mesh, used for staking, incentives, and economic participation. Tokens do not grant voting rights (see Section 3).

1.18 “Constitution”

This document, known as the Wnode Constitution v2.1, including all amendments ratified by the DAO in accordance with Section 5.

1.19 “NODLR Affiliate Affiliate Tree”

A commercial, non-governance asset representing the referral lineage of a NODLR. It is:
• transferable
• sellable
• permanent
• non-governance-bearing
• strictly limited to Level 1 and Level 2 only
• subject to the same freezing and protection rules as Founder Affiliate Trees (except depth limitations)

1.20 “Core Immutable Provisions”

Provisions that enjoy the highest level of protection and can only be amended with 100% DAO approval plus Founder Board confirmation. These include:
• 1 Soul = 1 Vote
• Soul non-transferability and permanence

1.21 “Dispute Resolution”

Final and binding arbitration seated in London under the LCIA Rules, governed by the laws of England & Wales.

Here is the fully detailed Section 2 for Wnode Constitution v2.1

SECTION 2 — GOVERNANCE HIERARCHY

This section establishes the structural order of authority within the Wnode DAO and defines how governance power is distributed, limited, and safeguarded.

The Wnode governance model is a hybrid constitutional system combining:
- decentralised community voting (1 Soul = 1 Vote),
- Founder-level constitutional guardianship with progressive decentralisation,
- operational oversight by the Governance Board,
- commercial stewardship via the Stewardship Licence, and

- technical protection through the Infrastructure Manager.

The governance hierarchy is defined as follows:

2.1 The DAO (Wnode DAO)

The DAO is the sovereign community governance body of the Wnode Mesh.

The DAO:
- votes on proposals,
- approves constitutional amendments,
- controls the Treasury,
- ratifies or rejects major system changes.

DAO voting is strictly 1 Soul = 1 Vote , ensuring:
- no whale dominance,
- no token-based power accumulation,
- no governance capture,
- equal representation for all verified individuals.

The DAO cannot override:
- the Core Immutable Provisions,
- the DAO owners' constitutional rights,
- the Stewardship Licence terms,
- the Founder Board's emergency powers and constitutional guardianship,
- the Infrastructure Manager's emergency technical authority.

These protections exist to prevent catastrophic governance failures.

2.2 The Initial Founder – Stephen Soos

The Founder holds the following permanent constitutional roles:
- Founder
- Architect
- Initial Steward
- Initial Governance Board Member

The Founder:
- established the Mesh,
- authored the Constitution,
- defined the governance architecture,
- created the token and identity systems,
- built the commercial and technical foundations.

2.3 The Founder Board

The Founder Board consists of four (4) members, including the Founder.

Its responsibilities include:

- constitutional guardianship,
- protection of the Mesh’s long-term integrity,
- appointment and removal of the Steward,
- oversight of the Infrastructure Manager,
- activation of emergency powers.

Progressive Decentralisation Clause:

To ensure long-term decentralisation, after 24 months from the genesis date or upon reaching 50,000 active Voting Souls (whichever occurs first), two (2) seats on the Founder Board shall transition to DAO-elected members serving 2-year terms (requiring 77% approval). The Founder retains a permanent seat. This balances early-stage protection against capture with community sovereignty.

The Founder Board is not fully elected by the DAO in its initial composition and exists to prevent:
- governance capture,
- malicious amendments,
- external takeover attempts,
- regulatory or technical sabotage.

2.4 The Governance Board

The Governance Board consists of the four initial members, including the Founder.

Its responsibilities include:
- operational oversight,
- proposal validation,
- treasury supervision,
- ensuring DAO decisions are implemented,
- ensuring the Steward and IM fulfil their duties.

The Governance Board is the operational governance layer, bridging:
- DAO decisions,
- Steward operations,
- Infrastructure Manager technical execution.

2.5 The Steward

The Steward is the holder of the Stewardship Licence, a commercial operational licence granting:
- revenue rights,
- operational authority,
- customer support responsibility,
- compliance responsibility,
- UX and platform management responsibility.

The Steward:
- does not control governance,
- does not control the Treasury,
- does not control the token,
- does not control the Founder Affiliate Tree,

- does not control the Infrastructure Manager.

The Steward is appointed and removable by the Founder Board.
The Founder is the Initial Steward.

2.6 The Infrastructure Manager (IM)

The IM is the technical authority responsible for:
- uptime,
- infrastructure reliability,
- node verification,
- emergency technical response,
- hardware acquisition and maintenance.

The IM:
- operates independently of the Steward,
- answers to the Governance Board,
- may activate emergency technical powers (Section 8).

The IM cannot:
- modify governance,
- alter token supply,
- interfere with the DAO,
- override the Founder Board.

2.7 Souls and NODLRs

Souls represent verified individuals.
NODLRs are Souls who:
- operate nodes,
- pass technical verification,
- pass Stripe KYC, AML and verification as Stripe sees fit
- earn Voting Souls,
- Own the DAO.

NODLRs:
- participate in DAO voting on a 1 Soul = 1 Vote basis,
- earn revenue from their nodes,
- Build their NODLR Affiliate Affiliate Trees (L1 + L2 only).

Souls (DAO Owners) form the community governance base.

2.8 Affiliate Tree Assets (Founder Affiliate Trees & NODLR Affiliate Affiliate Trees)

Affiliate Tree assets are commercial, not governance assets.
- Founder Affiliate Trees = infinite depth
- NODLR Affiliate Trees = Level 1 + Level 2 only
- All Affiliate Trees are transferable, sellable, permanent
- All Affiliate Trees follow freezing rules

Affiliate Tree assets cannot influence:
- DAO voting,
- governance power,
- token supply,
- constitutional amendments.

2.9 Hierarchy Summary

From highest constitutional authority to lowest:

1. The Constitution (including Core Immutable Provisions)
2. The DAO (1 Soul = 1 Vote)
3. The Governance Board
4. The Founder Board
5. The Steward (commercial operator)
6. The Infrastructure Manager (technical authority)

This structure ensures:
- decentralisation without chaos,
- community governance without vulnerability,
- commercial operation without governance capture,
- technical reliability without political interference.

SECTION 3 — SOULS, IDENTITY & VOTING RIGHTS

This section defines the identity system of the Wnode Mesh, the structure of Souls, and the rules governing voting rights within the DAO.

It establishes the 1 Soul = 1 Vote model and ensures that governance remains decentralised, fair, and resistant to capture.

3.1 Souls as the Foundation of Identity

A Soul is the core identity primitive of the Wnode Mesh.

A Soul:
- represents a verified human individual
- is non-transferable
- is bound permanently to a WUID
- cannot be sold, traded, or delegated
- is required for all governance participation

Souls ensure that governance is based on people, not capital. This is a Core Immutable Provision.

3.2 Types of Souls

There are two types of Souls:

- Locked Souls — identity-only, non-voting
- Voting Souls — earned through NODLR verification and node operation

A Soul may upgrade from Locked to Voting, but never downgrade unless revoked for cause (Section 11).

3.3 Locked Souls

A Locked Soul is issued when an individual:
- completes identity verification
- joins the Mesh
- but has not yet become a NODLR

Locked Souls:
- cannot vote
- cannot propose governance actions
- cannot hold governance roles
- may operate nodes but do not earn Voting Souls until verified

Locked Souls exist to ensure identity integrity without granting governance power prematurely.

3.4 Voting Souls

A Voting Soul is earned when an individual:
- becomes a verified NODLR
- passes technical verification
- Paases Stripe Verification
- operates a node in good standing

Voting Souls:
- grant full DAO voting rights
- allow proposal submission
- allow participation in elections
- allow participation in constitutional amendments

Voting Souls are the only source of governance power in the Wnode Mesh.

3.5 1 Soul = 1 Vote

A Soul is a flesh and blood human being, or Person.

The Wnode Mesh uses a strict one-person-one-vote model.

This prevents:
- whale dominance
- token-based governance capture
- plutocratic control
- governance manipulation
- vote-buying

This model ensures:
- fairness
- decentralisation
- equal representation
- long-term governance stability

No Person may ever hold more than one Voting Soul. This is a Core Immutable Provision.

3.6 Soul Permanence

Souls are:
- permanent
- bound to a single human
- non-transferable
- non-delegable
- non-fractional

A Soul cannot be revoked; it can only be frozen temporarily or permanently for:
- fraud
- identity violation
- malicious governance behaviour
- regulatory requirement

Revocation and freezing rules are defined in Section 11.

3.7 WUID Assignment

Each Soul receives a Wnode Universal Identifier (WUID).

A WUID:
- is permanent
- is globally unique
- identifies the Soul across all Wnode systems
- is required for governance participation
- is required for node operation
- is required for buying Ccompute
- is required to enter any dashboards

For example, the Founder’s WUID is 1000001-0426-01-AA.

3.8 Soul Privacy & Transparency

The Mesh balances:
- identity privacy, and
- governance transparency.

Souls:
- are pseudonymous by default

- may optionally be public
- must be verifiable by the system
- must be auditable for governance integrity

The DAO sees:
- Soul status (Locked or Voting)
- proposal history
- voting history

The DAO does not see:
- personal identity
- private data
- regulatory documents

3.9 Soul-Based Governance Integrity

The Soul system ensures:
- no duplicate identities
- no Sybil attacks
- no governance stacking
- no multi-account voting
- no token-based power accumulation

The Steward and Governance Board jointly enforce identity integrity.

3.10 Souls and Affiliate Tree Assets

Souls are identity assets.
Affiliate Trees are immutable commercial assets.

They are completely separate:
- Souls cannot be sold
- Affiliate Trees can be sold
- Souls grant governance power
- Affiliate Trees do not grant governance power
- Souls are permanent
- Affiliate Trees are transferable

This separation prevents commercial assets from influencing governance. This is a Core Immutable Provision.

3.11 Souls and Token Holdings

Token holdings:
- do not grant governance power
- do not increase voting weight
- do not influence elections
- do not override Souls

Tokens are economic assets.
Souls are governance assets.

This separation protects the Wnode Mesh from token-based governance capture. This is a Core Immutable Provision.

3.12 Summary of Soul Governance Rules

- 1 Soul = 1 Vote
- Souls are permanent and non-transferable
- Voting Souls require NODLR verification and onboarding
- Tokens do not influence governance
- Affiliate Trees do not influence governance
- Souls ensure decentralised, fair, human-based governance

SECTION 4 — NODES, NODLRS & OPERATIONAL PARTICIPATION

This section defines the operational layer of the Wnode Mesh, including node operation, NODLR status, verification requirements, and the rules governing participation in the compute network.

It establishes the standards for running nodes, earning revenue, maintaining network integrity, and participating in governance.

4.1 Node Definition

A Node is any compute device registered to the Wnode Mesh that:
- contributes compute resources,
- participates in distributed workloads,
- meets minimum hardware and uptime requirements,
- is linked to a Soul and WUID,

Nodes form the physical backbone of the Wnode Mesh.

4.2 Node Operator Requirements

To operate a node, an individual must:
- hold a Soul (Locked or Voting),
- register the device with the Wnode Mesh,
- maintain uptime requirements,
- comply with Stripe verification checks,
- adhere to security and compliance standards.

Node operators who meet all requirements may become NODLRs.

4.3 NODLR Status

A NODLR is a verified node operator who:
- passes identity verification,
- passes technical verification,

- passes Stripe verification checks
- maintains a node in good standing,
- earns a Voting Soul,
- gains full DAO voting rights.

NODLRs are the core operational participants of the Wnode Mesh.

4.4 NODLR Responsibilities

NODLRs must:
- maintain uptime,
- ensure hardware remains compliant,
- respond to Stripe verification requests,
- avoid malicious behaviour,
- maintain accurate identity information,
- operate nodes ethically and legally.

Failure to meet these obligations may result in:
- temporary suspension,
- loss of NODLR status,
- loss of Voting Soul (Section 11),
- freezing of NODLR Affiliate Affiliate Tree.

4.5 Node Verification

The Infrastructure Manager performs:
- initial verification,
- periodic verification,
- random spot checks,
- automated uptime monitoring,
- hardware compliance checks.

Verification ensures:
- no fraudulent nodes,
- no duplicated identities,
- no artificial scaling,
- no Sybil attacks,
- no compromised hardware.

4.6 Node Rewards

Node rewards are distributed according to:
- compute contribution,
- uptime,
- workload participation,
- network demand,
- platform rules.

Rewards are:

- paid automatically,
- transparent,
- auditable,
- independent of governance power.

Rewards do not influence DAO voting.

4.7 NODLR Affiliate Affiliate Trees (L1 + L2 Only)

Each NODLR maintains a two-level affiliate Affiliate Tree:
- Level 1: direct recruits
- Level 2: indirect recruits

NODLR Affiliate Trees:
- are immutable permanent commercial assets,
- are transferable,
- are sellable,
- are permanent,
- do not extend beyond Level 2,
- do not grant governance power,
- follow the same freezing rules as Founder Affiliate Trees (except depth limitations).

This ensures fairness and prevents pyramid-style expansion.

4.8 Founder Affiliate Tree Distinction

Founder Affiliate Trees differ from NODLR Affiliate Trees:
- Founder Affiliate Trees are infinite depth,
- NODLR Affiliate Trees are L1 + L2 only,
- Founder receives 3% of the entire Founder Affiliate Tree to infinity.

This distinction is structural and permanent. This is a Core Immutable Provision.

4.9 Node Suspension & Removal

Nodes may be suspended or removed for:
- repeated downtime,
- hardware non-compliance,
- fraudulent activity,
- identity violations,
- malicious behaviour,
- regulatory requirements.

Suspension may result in:
- loss of rewards, not revenue
- loss of NODLR status,
- freezing of NODLR Affiliate Tree L1 expansion but not revenue or ownership,
- loss of Voting Soul (Section 11).

4.10 Node Reactivation

Suspended nodes may be reactivated if:
- compliance is restored,
- identity is re-verified,
- hardware is repaired or replaced,
- IM approves reinstatement.

Reactivation does not automatically restore lost governance rights unless explicitly approved by the Governance Board.

4.11 Operational Integrity

All node operators must:
- maintain secure hardware,
- avoid prohibited workloads,
- comply with jurisdictional regulations,
- avoid interference with the Wnode Mesh,
- avoid attempts to manipulate workloads or rewards.
- run nodes in Virtual machines or environments

The IM may take immediate action to protect the Mesh.

4.12 Summary of Node & NODLR Rules

- Nodes form the compute backbone
- NODLRs are verified node operators
- NODLRs earn Voting Souls
- NODLR Affiliate Trees are L1 + L2 only
- Founder Affiliate Trees are infinite
- Rewards do not influence governance
- IM enforces technical integrity
- Governance and commercial assets remain separate

4.13 Appeal Process (New)

Any NODLR facing suspension, removal, Affiliate Tree freezing, or loss of Voting Soul may submit a written appeal to the Governance Board within 7 days of notification.
The Governance Board shall review the appeal within 14 days.
In exceptional cases, the matter may be escalated to the DAO via an Emergency Proposal.
All decisions must be documented and published for transparency.

Here is the fully detailed Section 5 for Wnode Constitution v2.1

SECTION 5 — GOVERNANCE PROPOSALS & VOTING PROCEDURES

This section defines how governance proposals are created, submitted, validated, voted on, and enacted within the Wnode Mesh.

It establishes the rules for DAO participation, proposal types, voting thresholds, and the constitutional safeguards that prevent governance abuse.

5.1 Proposal Categories

All governance actions fall into one of the following categories:
- Operational Proposals — routine changes to platform parameters, UX, or processes
- Economic Proposals — reward rates, fee structures, economic parameters
- Treasury Proposals — spending, grants, investments, or treasury allocations
- Role Proposals — appointments or removals (except Founder roles)
- Constitutional Amendments — changes to this Constitution
- Emergency Proposals — urgent actions requiring accelerated voting

Each category has its own thresholds and validation requirements.

5.2 Who May Submit Proposals

Only individuals with a Voting Soul may submit proposals.

This ensures:
- no anonymous governance manipulation
- no proposal spam
- no influence from non-verified actors

Locked Souls and non-Souls may not submit proposals.

5.3 Proposal Submission Requirements

A valid proposal must include:
- the proposer’s WUID
- the proposal category
- a clear description of the change
- the expected impact
- any required resources
- any required Treasury allocation
- implementation details (if applicable)

Proposals missing required information may be rejected by the Governance Board.

5.4 Governance Board Validation

Before a proposal goes to a DAO vote, the Governance Board may:
- verify the proposal category
- confirm it does not violate the Constitution or Core Immutable Provisions
- confirm it does not violate regulatory requirements
- confirm it does not compromise network security
- confirm it is technically feasible
- confirm it is economically viable
- approve the proposal for voting

- request revisions
- reject the proposal with justification

This prevents harmful or invalid proposals from reaching the DAO.

5.5 DAO Voting Process

Once validated, proposals enter the DAO voting cycle.

Voting rules:
- 1 Soul = 1 Vote
- Voting Souls only
- Votes are final once cast
- Abstentions do not count toward thresholds
- Voting period: 7 days (unless emergency)

Votes may be:
- YES
- NO

A proposal passes if it meets the required threshold for its category.

5.6 Voting Thresholds (Revised for balance and practicality)

Proposal Type	Approval Threshold	Quorum	Notes
Operational Proposals	>66% YES	20%	Routine changes
Economic Proposals	>80% YES	25%	Reward/fee changes
Treasury Proposals	>70% YES	30%	Must include spending justification
Role Proposals (non-Founder)	>75% YES	30%	Governance Board pre-approval of candidates
Constitutional Amendments (non-core)	>85% YES	40%	-
Core Immutable Provisions	100% YES	50%	Highest protection
Emergency Proposals	>50% YES	None	24-hour voting window, must be co-signed by IM or Founder Board

5.7 Quorum Requirements

A proposal requires the minimum participation level shown above to be valid. If quorum is not met, the proposal automatically fails.

5.8 Proposal Enactment

If a proposal passes:
- the Governance Board oversees implementation
- the Steward executes operational changes
- the Infrastructure Manager executes technical changes
- the Treasury executes financial changes
- the DAO receives a public implementation report

Implementation must occur within:
- 14 days for operational changes
- 30 days for economic or treasury changes
- immediately for emergency actions

5.9 Proposal Rejection

If a proposal fails:
- it may not be resubmitted for 30 days
- it may only be submitted twice in a 12-month period from the original submission date (unless materially revised or the Governance Board grants an exception)

Rejected proposals remain publicly archived.

5.10 Founder Board Veto (Limited Use)

The Founder Board may veto proposals that threaten:
- network integrity
- regulatory compliance
- security
- Founder rights or Core Immutable Provisions

The veto:
- must be justified in writing
- must be published to the DAO
- may be overridden by a 90% DAO supermajority within 14 days

5.11 Proposal Transparency

All proposals, votes, and outcomes are:
- public
- permanent
- auditable
- linked to WUIDs

5.12 Dispute Resolution

Any dispute regarding proposal validity, voting results, or implementation shall be resolved through the process in Section 1.21 (London arbitration under LCIA Rules).

5.13 Summary of Proposal & Voting Rules

- Only Voting Souls may submit proposals
- Governance Board validates proposals
- DAO votes using 1 Soul = 1 Vote
- Thresholds vary by proposal type with stronger protections for Core Immutable Provisions
- Founder Board retains limited veto power
- All actions are transparent and auditable

SECTION 6 — THE STEWARDSHIP LICENCE

The Stewardship Licence defines the commercial, operational, and administrative authority granted to the Steward.

It establishes the rights, obligations, limitations, and revocation conditions under which the Steward operates the Wnode Mesh.

The Stewardship Licence is a commercial licence, not a governance role.

The Founder is the Initial Steward.

6.1 Nature of the Stewardship Licence

The Stewardship Licence is:
- perpetual unless revoked for cause
- commercial in nature
- non-governance-bearing
- non-transferable without Founder Board approval
- revocable under defined conditions
- independent of token supply or DAO voting power

The Licence grants operational authority, not political authority. Detailed commercial terms (including revenue share) are set out in a separate, publicly available Stewardship Licence Agreement.

6.2 Rights Granted to the Steward

The Steward is granted the right to:
- Operate the Platform — manage UX, onboarding, support, and user-facing systems
- Manage Customer Support — provide assistance to users and NODLRs
- Handle Compliance — ensure regulatory adherence, including data protection
- Manage Commercial Operations — oversee revenue-bearing activities
- Receive Revenue Share — as defined in the Stewardship Licence Agreement
- Maintain Platform Documentation — update help pages, guides, and onboarding flows

The Steward does not receive governance power.

6.3 Responsibilities of the Steward

The Steward must:
- Maintain Operational Stability
- Ensure User Safety
- Provide Accurate Information
- Support NODLRs
- Maintain Compliance
- Coordinate with the Governance Board
- Cooperate with the Infrastructure Manager

Failure to meet these obligations may result in suspension or revocation of the Licence.

6.4 Steward Limitations

The Steward cannot:
- modify governance rules
- alter token supply
- change DAO voting mechanisms
- interfere with the Infrastructure Manager
- override Governance Board decisions
- access or control the Treasury
- modify Founder Affiliate Tree rules
- appoint or remove governance roles

The Steward is an operator, not a governor.

6.5 Revenue Rights

The Steward receives revenue as defined in:
- the Stewardship Licence Agreement
- platform payment rules
- Stripe payout architecture

Revenue rights include:
- operational revenue share as defined in the Stewardship Licence Agreement

Revenue rights do not include:
- governance influence
- token minting
- Treasury access

6.6 Steward Obligations to the DAO

The Steward must:
- implement DAO-approved operational changes
- publish quarterly operational reports
- maintain transparent communication
- uphold the Constitution
- ensure fair treatment of all users
- avoid conflicts of interest

The Steward is accountable to the Governance Board and Founder Board.

6.7 Steward Obligations to the Infrastructure Manager

The Steward must:
- provide accurate operational data
- support IM verification processes
- avoid interference with technical operations

- escalate technical issues promptly
- comply with IM emergency actions

The IM has priority in all technical matters.

6.8 Steward Obligations to the Founder Board

The Steward must:
- comply with DAO and Governance Board directives
- maintain the integrity of the Wnode Mesh
- avoid actions that threaten long-term stability
- uphold the Founder’s constitutional rights
- maintain the Affiliate Affiliate Tree structure

The Governance Board may intervene if the Steward fails to meet obligations.

6.9 Steward Removal

The Steward may be removed by the Founder Board for:
- breach of Licence
- operational negligence
- regulatory violations
- fraud or misconduct
- actions threatening network stability
- refusal to implement DAO-approved changes
- attempts to alter governance

Removal triggers:
- immediate freezing of the Steward’s Founder Affiliate Tree
- appointment of a new Steward
- transfer of operational authority

6.10 Steward Replacement

Upon removal or resignation:
- the Governance Board approves or appoints a new Steward
- the outgoing Steward’s Founder Affiliate Tree becomes a Frozen Affiliate Tree
- the new Steward receives a new Founder Affiliate Tree
- all operational authority transfers immediately
- no governance rights are transferred

This ensures continuity without governance disruption.

6.11 NODLR Affiliate Affiliate Tree Rules Under the Steward

The Steward has no authority over:
- NODLR Affiliate Affiliate Tree ownership
- NODLR Affiliate Affiliate Tree transfer
- NODLR Affiliate Affiliate Tree revenue

- NODLR Affiliate Affiliate Tree structure

NODLR Affiliate Trees remain:
- immutable commercial assets
- L1 + L2 only
- independent of Steward control

6.12 Steward Independence from Governance

The Steward:
- cannot vote in the DAO unless they are also a NODLR
- cannot propose governance changes unless they hold a Voting Soul
- cannot influence governance through commercial operations
- cannot use revenue to influence governance

This separation protects the Wnode Mesh from commercial governance capture.

6.13 Summary of Stewardship Rules

- Stewardship Licence = commercial, not governance
- Founder is the Initial Steward
- Steward operates the platform
- Governance Board oversees the Steward
- Governance Board appoints/removes the Steward
- IM handles technical authority
- Steward Affiliate Trees freeze upon removal
- NODLR Affiliate Trees remain independent
- No governance power is granted through the Licence
- Annual performance review and public reporting required for transparency

SECTION 7 — Affiliate Tree ASSETS

Affiliate Tree Assets are commercial, non-governance, non-token structures representing referral lineage and organic growth within the Wnode Mesh. They are permanent economic assets but have zero influence over governance, voting, token supply, or constitutional authority.

This section defines the rights, limitations, and protections for all Affiliate Tree Assets.

7.1 Definition of Affiliate Tree Assets

Affiliate Tree Assets include:
- Founder Affiliate Trees — infinite-depth commercial lineage
- NODLR Affiliate Affiliate Trees — strictly Level 1 + Level 2 only

Affiliate Tree Assets:
- are commercial assets
- are transferable
- are sellable
- are permanent

- do not grant governance power
- do not influence DAO voting
- do not affect token supply

This separation of commercial and governance assets is a Core Immutable Provision.

7.2 Founder and Partner Affiliate Affiliate Trees

A Founder and Partner Affiliate Affiliate Tree is a permanent commercial asset assigned to the initial Founders and Partners.

Founder and Partner Affiliate Trees:
- have infinite depth
- grow organically and through referrals
- are transferable as an asset
- are non-governance-bearing

Founder Revenue Entitlement
The Founder receives:
- 3% of the entire Founder Affiliate Tree to infinity

This entitlement is immutable, permanent, and constitutionally protected. This is a Core Immutable Provision.

7.3 NODLR Affiliate Affiliate Trees (Level 1 + Level 2 Only)

Each NODLR maintains a two-level commercial Affiliate Tree:
- Level 1: direct recruits
- Level 2: indirect recruits

NODLR Affiliate Trees:
- cannot expand beyond Level 2
- are commercial assets
- are transferable
- are sellable
- are permanent
- do not grant governance power
- follow the same freezing and protection rules as Founder Affiliate Trees (except depth limitations)

This structure prevents pyramid-style expansion and maintains fairness.

7.4 Affiliate Tree Ownership Rights

Affiliate Tree owners (Founder or NODLR) have the right to:
- Transfer Ownership
- Sell Their Affiliate Tree
- Receive Revenue
- Maintain Commercial Control

Affiliate Tree ownership does not grant:
- governance rights
- DAO voting power
- token minting rights
- constitutional authority

7.5 Affiliate Tree Transfer Rules

Affiliate Tree Assets may be transferred:
- voluntarily (sale, gift, assignment)
- involuntarily (regulatory requirement, estate transfer)

Transfers must:
- be registered on-chain
- not violate identity or compliance rules
- comply with applicable laws

7.6 Affiliate Tree Freezing Rules

A Affiliate Tree becomes a Frozen Affiliate Tree when:
- a NODLR is removed for cause
- identity fraud is detected
- regulatory action requires suspension

A Frozen Affiliate Tree:
- remains owned by the individual
- continues receiving existing revenue
- cannot recruit new Level 1 members
- may be unfrozen only by Governance Board approval (with appeal rights under Section 4.13)

7.7 Stewardship Transitions & Founder Affiliate Trees

When a Steward is removed or resigns:
- their Founder Affiliate Tree becomes a Frozen Affiliate Tree
- a new Founder Affiliate Tree is issued to the incoming Steward
- the Founder’s 3% infinite-Affiliate Tree entitlement remains unaffected
- no governance rights transfer

This ensures continuity without governance disruption.

7.8 NODLR Removal & Affiliate Tree Freezing

If a NODLR is removed for:
- fraud
- identity violation
- malicious behaviour
- regulatory breach
- repeated non-compliance

Then:
- their NODLR Affiliate Affiliate Tree becomes a Frozen Affiliate Tree
- they retain existing revenue
- they lose the ability to expand the L1 Affiliate Tree but benefit from organic growth beyond L1
- they may lose their Voting Soul (Section 11)

7.9 Affiliate Tree Assets & Governance Separation

Affiliate Tree Assets are strictly commercial.
They cannot:
- influence DAO voting
- influence proposal outcomes
- influence token supply
- influence governance roles
- be used to buy political power

This separation protects the Wnode Mesh from commercial governance capture. This is a Core Immutable Provision.

7.10 Affiliate Tree Assets & Token Independence

Affiliate Tree Assets:
- do not mint tokens
- do not burn tokens
- do not modify token supply
- do not grant token-based governance rights

Tokens and Affiliate Trees are independent economic systems.

7.11 Affiliate Tree Asset Transparency

All Affiliate Tree Assets are:
- visible to their owners
- auditable by the platform
- compliant with privacy rules
- pseudonymous unless voluntarily disclosed

The DAO does not see personal identity information.

7.12 Summary of Affiliate Tree Asset Rules

- Founder Affiliate Trees = infinite depth
- NODLR Affiliate Trees = L1 + L2 only
- All Affiliate Trees are commercial assets
- No Affiliate Tree grants governance power
- Founder receives 3% of entire Founder Affiliate Tree to infinity (Core Immutable Provision)
- Affiliate Trees are transferable and sellable
- Affiliate Trees may be frozen only for cause, with appeal rights
- Governance and commercial assets remain fully separated

7.13 Affiliate Tree Revenue

Nodlrs earn the following commission from their Affiliate Tree

Level 1 = 3%
Level2 = 7%

An Affiliate Tree is an immutable asset

SECTION 8 — EMERGENCY POWERS & NETWORK PROTECTION

This section defines the emergency powers granted to the Founder Board and the Infrastructure Manager (IM), and the conditions under which these powers may be activated.

Emergency powers exist solely to protect the Wnode Mesh from catastrophic harm and cannot be used for political or commercial purposes.

These powers ensure the Wnode Mesh remains secure, stable, and resilient under extreme conditions.

8.1 Purpose of Emergency Powers

Emergency powers exist to:
- Protect the Mesh from catastrophic failure
- Prevent Governance Capture
- Respond to Attacks
- Ensure Technical Stability
- Comply with Regulatory Requirements

Emergency powers are temporary, limited, proportionate, and auditable.

8.2 Entities Authorized to Declare an Emergency

Only the following entities may declare an emergency:
- Founder Board
- Infrastructure Manager (IM)
- Steward (in coordination with the above)
- DAO (via Emergency Proposal)

8.3 Types of Emergencies

Emergencies fall into the following categories:
- Technical Emergencies — outages, hardware failures, network instability
- Security Emergencies — attacks, exploits, malicious actors
- Governance Emergencies — attempted governance capture, fraudulent voting
- Regulatory Emergencies — legal orders, compliance threats
- Operational Emergencies — Steward failure, data corruption, platform compromise

Each emergency type has specific powers and limitations.

8.4 Infrastructure Manager Emergency Powers

The IM may activate emergency powers without prior approval if immediate action is required to protect the network.

The IM may:
- Suspend Nodes
- Block Malicious Actors
- Isolate Network Segments
- Pause Workloads
- Enforce Technical Lockdowns
- Trigger Security Protocols

The IM cannot:
- alter governance
- modify token supply
- freeze Tree Assets
- remove Souls
- override the Founder Board

All IM emergency actions must be logged and reported to the Governance Board and DAO within 24 hours.

8.5 Governance Board / Founder Board Emergency Powers

The Founder Board (or Governance Board in coordination) may activate emergency powers to protect:
- the Constitution and Core Immutable Provisions
- the Mesh
- the DAO
- the Founder’s rights
- the long-term stability of the network

The Founder Board may:
- Freeze Governance Processes (temporarily)
- Override Malicious Proposals
- Freeze Tree Assets (for cause)
- Remove the Steward
- Suspend the Stewardship Licence
- Authorize IM Technical Actions

The Founder Board cannot:
- change the Constitution unilaterally
- alter token supply
- appoint Governance Board members without process
- permanently remove DAO voting rights

8.6 Emergency Duration Limits

Emergency powers:
- last for a maximum of 72 hours initially
- may be extended once for an additional period not exceeding 7 days total, with written justification
- require DAO review and ratification after expiration
- cannot be used to create permanent governance changes

8.7 Emergency Transparency Requirements

All emergency actions must be:
- logged
- published to the DAO
- timestamped
- linked to WUIDs (where applicable)
- auditable by the DAO

Transparency ensures emergency powers cannot be abused.

8.8 DAO Oversight After Emergencies

After an emergency ends:
- the DAO receives a full public report within 7 days
- the DAO may review or reverse non-critical actions via standard proposal process
- the DAO may propose reforms
- the Governance Board must confirm restoration of normal operations

The DAO cannot override:
- Founder Board constitutional protections
- IM technical safety actions taken in good faith

8.9 Summary of Emergency Powers

- Emergency powers are defensive only
- Strictly time-limited with mandatory DAO oversight
- Full transparency and auditability required
- Balance of rapid response with accountability
- Cannot override Core Immutable Provisions

SECTION 9 — TOKENOMICS & ECONOMIC MODEL

This section defines the economic framework of the Wnode Mesh, the role of the Wnode Token, Treasury management, and protections for investors, node operators, and the broader community.

9.1 Purpose of the Wnode Token

The Wnode Token is a utility and incentive token. It is designed to support network growth, reward participation, and enable economic activity within the Mesh.

Critical Separation:

Governance power resides exclusively with Souls (1 Soul = 1 Vote). Token holdings confer no voting rights, no proposal submission rights, and no governance influence. This is a Core Immutable Provision.

9.2 Token Supply and Issuance

- The total token supply is fixed or algorithmically capped as detailed in the official Wnode Technical Whitepaper.
- No unilateral minting is permitted.
- Any changes to token supply mechanics (including burns or additional emissions) require an Economic Proposal (>87% approval).
- Initial token distribution, team allocations, and vesting schedules shall be publicly disclosed at launch and subject to standard industry vesting (minimum 12–36 months with cliffs where applicable).

9.3 Token Utility

The Wnode Token may be used for:
- Staking to earn network incentives
- Payment of certain platform fees (with possible discounts)
- Participating in network incentives and reward pools
- Collateral or access to advanced features (if implemented)
- Ecosystem governance-adjacent utilities (subject to Soul-based oversight)

9.4 Node Rewards and Operator Economics

- Node operators (NODLRs) earn rewards primarily based on actual compute contribution, uptime, and workload performance.
- Rewards are paid in FIAT currency at launch but Token reward payments will be introduced as an option wihtin 6 months of launch
- Rewards are independent of token holdings and governed by transparent, auditable rules.
- All reward mechanisms are subject to Economic Proposals.

9.5 Treasury Management

The Treasury is the on-chain financial reserve of the DAO and shall be managed as follows:
- Controlled by DAO vote with Governance Board supervision.
- Multi-signature wallet requiring approvals from designated Governance Board members and/or automated smart contract rules.
- Quarterly public audits by an independent third party (results published to the DAO).
- Major allocations (exceeding 5% of total Treasury value) require a dedicated Treasury Proposal (>70% approval).
- Treasury funds may be used for: network development, marketing, security, grants, liquidity provision, and ecosystem growth.

9.6 Economic Proposals

All material changes to economic parameters (reward rates, fee structures, emissions schedules, staking mechanics, etc.) require an Economic Proposal with >87% approval and 25% quorum.

9.7 Investor and Operator Protections

- Token holders participate in the economic upside of the network through staking rewards, fee sharing, and token utility.
- Node operators are protected by performance-based rewards and commercial Tree assets.
- No special rights or privileges are granted to large token holders in governance.
- Anti-dilution and fair launch principles shall guide initial token distribution.
- All economic activity is subject to full transparency and auditability.

9.8 Revenue Flow Overview

Initially paid in USD via Stripe Connect.

Typical revenue flow :
1. Node Operators 70%
2. Sales Source 10%
3. Founder override 3%
4. Level 1 Affiliate Commission = 3%
5. Level 2 Affiliate Commission 7%
6. Steward = 7%

9.9 Prohibition on Manipulative Practices

The following are strictly prohibited:
- Wash trading or artificial inflation of activity
- Insider trading based on non-public information
- Use of Treasury funds for personal enrichment without DAO approval
- Any action intended to circumvent the 1 Soul = 1 Vote principle

Violations may result in Soul freezing, Tree freezing, and legal action.

9.10 Summary of Tokenomics Rules

- Tokens provide economic utility, not governance power
- Governance remains strictly Soul-based (Core Immutable Provision)
- Transparent, DAO-controlled Treasury with strong oversight
- Performance-based rewards for real operators
- Fixed or capped supply with high barriers to change
- Full transparency and regular audits required

SECTION 10 — COMPLIANCE, LIABILITY & GENERAL PROVISIONS

This section establishes the compliance framework, liability limitations, and general legal provisions that govern the Wnode Mesh and all participants.

10.1 Regulatory Compliance

The Wnode Mesh and all participants shall comply with applicable laws, including but not limited to:
- Anti-Money Laundering (AML) and Know-Your-Customer (KYC) requirements

- Data protection laws (including GDPR and equivalent regulations)
- Sanctions and export control laws
- Consumer protection and financial services regulations

All identity verification, node operation, and financial transactions shall be conducted through approved providers (such as Stripe) and meet or exceed industry standards.

10.2 Data Protection and Privacy

- The Mesh shall process personal data in accordance with applicable privacy laws.
- Souls are pseudonymous by default. Personal data is collected only to the extent necessary for verification, compliance, and network security.
- Participants acknowledge that certain data (e.g., node performance metrics, transaction history) may be publicly visible or auditable for governance and transparency purposes.

10.3 Limitation of Liability

To the maximum extent permitted by law:
- The DAO, Founder, Founder Board, Governance Board, Steward, Infrastructure Manager, and their respective affiliates shall not be liable for any indirect, incidental, special, consequential, or punitive damages.
- Participants use the Wnode Mesh at their own risk.
- No party shall be liable for any loss of profits, loss of data, or business interruption arising from the use or inability to use the Mesh.
- Total liability shall not exceed the amounts paid by the participant to the Mesh in the preceding 12 months (where applicable).

10.4 Indemnification

Each participant (including NODLRs, token holders, and users) agrees to indemnify, defend, and hold harmless the DAO, Founder, Boards, Steward, IM, and their agents from any claims, damages, losses, liabilities, and expenses (including legal fees) arising from:
- Their operation of nodes
- Violation of this Constitution
- Breach of applicable laws
- Misuse of the Mesh or compute resources
- Any prohibited workloads or illegal activities

10.5 Risk Acknowledgment

Participants acknowledge the inherent risks of blockchain, DePIN, and decentralised networks, including but not limited to:
- Volatility of token value
- Technical failures and bugs
- Regulatory changes
- Cybersecurity threats
- Loss of funds or assets

10.6 Governing Law and Dispute Resolution

- This Constitution is governed by the laws of England & Wales.
- Any dispute, controversy, or claim arising out of or in connection with this Constitution (including its formation, validity, or termination) shall be finally settled by arbitration under the LCIA Rules, seated in London, by a single arbitrator (or three if the claim exceeds £1,000,000).
- The language of arbitration shall be English.

10.7 Force Majeure

No party shall be liable for any failure or delay in performance due to circumstances beyond their reasonable control, including acts of God, war, terrorism, pandemics, government orders, or major internet disruptions.

10.8 Severability

If any provision of this Constitution is held to be invalid or unenforceable, the remaining provisions shall remain in full force and effect.

10.9 Entire Agreement

This Constitution (including all duly ratified amendments) constitutes the entire agreement between the DAO and its participants regarding its subject matter and supersedes all prior agreements and understandings.

10.10 Amendments

This Constitution may only be amended in accordance with the procedures set out in Section 5. Core Immutable Provisions require heightened protection (95% approval + Founder Board confirmation).

10.11 Summary

- Full regulatory compliance is mandatory
- Clear limitation of liability and indemnification
- England & Wales law and London arbitration govern disputes
- Participants accept the risks inherent in decentralised networks
- Strong separation between commercial, technical, and governance layers is maintained

SECTION 11 — ENFORCEMENT, SANCTIONS, FREEZING & APPEALS

This section defines the rules for enforcement, sanctions, freezing of assets, revocation of rights, and the due process protections afforded to all participants.

11.1 General Enforcement Authority

The Governance Board, in coordination with the Founder Board and Infrastructure Manager where appropriate, is responsible for enforcing this Constitution. All enforcement actions must be:
- Based on documented evidence
- Proportionate to the violation
- Transparent and auditable

- Subject to appeal rights

11.2 Grounds for Sanctions

Sanctions may be applied for:
- Fraud or identity misrepresentation
- Serious violation of identity verification rules
- Malicious behaviour or attacks on the network
- Repeated non-compliance with node operation standards
- Breach of the Stewardship Licence
- Attempted governance capture or manipulation
- Regulatory violations or legal non-compliance
- Severe misconduct that threatens the Mesh

11.3 Types of Sanctions

The following sanctions may be imposed (individually or in combination):
- Temporary suspension of node operations
- Freezing of NODLR Affiliate Tree (Level 1 recruitment)
- Freezing of Founder Tree (in the case of the Steward or other parties)
- Temporary or permanent revocation of Voting Soul status
- Removal from governance roles
- Revocation or suspension of the Stewardship Licence

11.4 Soul Freezing or Revocation

A Voting Soul may be frozen or revoked only for cause and following due process. Grounds include:
- Proven identity fraud or multiple Souls
- Malicious governance behaviour (e.g., coordinated Sybil attacks)
- Severe regulatory violations
- Conviction of serious criminal offences related to the Mesh

Locked Souls may be frozen but are generally not revoked unless identity fraud is proven.

11.5 Tree Freezing

Freezing of Trees follows the rules in Section 7.6. A Frozen Tree:
- Remains owned by the individual
- Continues to receive existing revenue
- Loses the right to recruit new Level 1 members
- May be unfrozen upon successful appeal or remediation

11.6 Due Process and Notification

Before imposing any sanction (except immediate emergency technical actions by the IM):
- The affected party must receive written notice stating the grounds and evidence
- The party shall have 7 days to respond and submit mitigating evidence
- Decisions must be documented and published (pseudonymously where possible)

11.7 Appeal Process

Any party subject to sanctions has the right to appeal: by email to support@wnode.one
1. First appeal: To the Governance Board (within 7 days of notice)
2. Second appeal: To the Founder Board (within 7 days of Governance Board decision)
3. Final escalation: Via Emergency Proposal to the full DAO (if the matter is significant)

All appeal decisions must be justified in writing and made public.

11.8 Reinstatement

A sanctioned NODLR, Soul, or Tree may be reinstated if:
- The cause for sanction has been resolved
- The party demonstrates ongoing compliance
- The Governance Board (or DAO on appeal) approves reinstatement

11.9 Steward-Specific Sanctions

Removal of the Steward follows Section 6.9 and automatically results in freezing of their Founder Tree. The decision rests with the Founder Board, subject to the appeal process above.

11.10 Transparency and Record Keeping

All sanctions, freezing actions, appeals, and outcomes shall be:
- Logged permanently on the platform
- Made available to the DAO (with appropriate privacy safeguards)
- Reviewed periodically by the Governance Board

11.11 Limitation on Sanctions

No sanction may:
- Violate Core Immutable Provisions
- Be applied retroactively
- Be used to suppress legitimate governance participation
- Circumvent the 1 Soul = 1 Vote principle

11.12 Summary of Enforcement Rules

- Sanctions only for documented cause
- Full due process and appeal rights guaranteed
- Transparency and accountability required
- Balance between network protection and individual fairness
- Highest protections for Core Immutable Provisions

SECTION 12 — AMENDMENTS, RATIFICATION & FINAL PROVISIONS

12.1 Amendment Procedures

This Constitution may be amended only through the formal governance process defined in Section 5.

- Non-core amendments: Require >87% approval with 40% quorum.
- Core Immutable Provisions: Require 100% YES approval with 50% quorum and confirmation by the Founder Board.

No amendment may retroactively impair vested commercial rights (such as existing Tree revenue entitlements) without the explicit consent of the affected parties.

12.2 Core Immutable Provisions

The following are designated as Core Immutable Provisions and enjoy the highest level of protection:
- 1 Soul = 1 Vote (one person, one vote)
- Soul non-transferability, permanence, and binding to a single human
- Separation of governance power (Souls) from economic assets (Tokens and Trees)
- Founder's 3% entitlement to the entire Founder Tree to infinity
- Prohibition on token-based governance

These provisions reflect the foundational principles of the Wnode Mesh and may only be changed under the strictest conditions.

12.3 Ratification

This Constitution v2.1 is ratified by:
- The electronic signature of the Founder (Stephen Soos)
- Approval through the initial genesis governance process

12.4 Continuity and Transition

- All existing Souls, Nodes, Trees, and agreements remain valid under this Constitution.
- The Founder Board may issue transitional guidelines as needed during the initial implementation period.
- Progressive decentralisation mechanisms (including Founder Board seat transitions) shall activate automatically as defined in Section 2.

12.5 Interpretation

In case of any ambiguity or conflict:
- The English language version shall prevail.
- This Constitution shall be interpreted in a manner that best preserves decentralisation, fairness, transparency, and the protection of Core Immutable Provisions.
- The Governance Board may issue official interpretations, subject to DAO review.

12.6 Severability

If any provision of this Constitution is declared invalid or unenforceable, the remaining provisions shall continue in full force and effect.

12.7 Waiver

No waiver of any breach shall constitute a waiver of any subsequent breach of the same or different nature.

12.8 Entire Agreement

This Constitution, together with the Stewardship Licence Agreement and publicly referenced technical documents (Whitepaper, Node Rules, etc.), constitutes the entire understanding between the DAO, its participants, and the Founder regarding the governance of the Wnode Mesh.

12.9 Final Declaration

This Constitution is adopted with the shared commitment that Wnode shall remain a public good — community-owned, community-governed, decentralised, transparent, and fair — for current and future generations.

SECTION 13 — SOVEREIGNTY AND INFRASTRUCTURE INDEPENDENCE

Wnode is committed to achieving full operational sovereignty, technological independence, and long-term resilience. To eliminate reliance on external providers and ensure maximum control over its core systems, the Mesh shall own and operate the following critical infrastructure:

13.1 Sovereign Physical Infrastructure

Own and operate its own physical servers
The Infrastructure Manager shall maintain and expand Wnode-owned bare-metal server infrastructure as the primary backbone for critical network coordination and verification functions.

Own and operate its own primary development environment
All core protocol development, smart contracts, node software, platform tooling, and testing environments shall be hosted and managed within Wnode’s self-operated development infrastructure.

Own and operate its own Uninterruptible Power Supply (UPS) and power resilience systems
Critical infrastructure shall be protected by Wnode-owned UPS systems and backup power solutions.

Own and operate its own solar array
Wnode shall develop and maintain its own solar power generation capacity to provide clean, independent, and resilient energy to its core infrastructure.

13.2 Sovereign AI Capability

Own and operate its own recursive AI LLM

Wnode shall own and operate its own proprietary recursive Large Language Model (LLM). This sovereign AI system will be designed to:

- Intelligently route jobs across the global compute mesh with superior insights, speed, and efficiency
- Continuously learn and improve from network data and operational outcomes

- Rapidly take over and enhance customer support functions
- Assist with core development, debugging, and protocol optimization
- Provide autonomous operational intelligence to the Infrastructure Manager and Steward

The development, training, hosting, and governance of this recursive AI shall remain under the full control of Wnode's sovereign infrastructure and be subject to oversight by the Infrastructure Manager and Governance Board.

13.3 Purpose of Sovereignty Measures

These sovereignty principles ensure total infrastructure and technological independence. While the broader Wnode Mesh remains a decentralised network of community-operated nodes, the core coordination layer, development environment, power systems, and AI capabilities shall be protected through self-owned and self-operated infrastructure.

This approach delivers:
- Maximum resistance to censorship, deplatforming, or external service termination
- Enhanced security, performance, and operational control
- True energy and technological sovereignty
- Accelerated innovation through recursive AI capabilities
- Long-term alignment with the principles of decentralisation and self-reliance

13.4 Reporting and Transparency

The Infrastructure Manager shall provide regular reports to the Governance Board and the DAO on the status, capacity, security, and expansion of all sovereign infrastructure and AI systems.

Signed:

Stephen Soos
